CONTENTS

MATHEMATICS GUIDE	1–92
1. Numbers and Fractions	3–8
2. BODMAS	9–11
3. LCM and HCF of Numbers	12–15
4. Ratio and Proportion	16–19
5. Percentage	20–23
6. Mensuration	24–31
7. Time and Work	32–35
8. Time, Speed and Distance	36–39
9. Simple and Compound Interest	40–44
10. Profit, Loss and Discount	45–49
11. Elementary Algebra	50–52
12. Geometry	53–67
13. Trigonometry	68–73
14. Elementary Statistics	74–80
15. Square Root	81–86
16. Clock and Calendar	87–89
17. Pipes & Cistern	90–92

MATHEMATICS GUIDE

1

NUMBERS AND FRACTIONS

- **Numerals:** In Hindu Arabic system, we use ten symbols, numeral 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9. We call them digits. A number is denoted by a group of digits, called numeral.
- **Place value:** In a numeral 176524, we have
Place value of 4 = $(4 \times 1) = 4$
Place value of 2 = $(2 \times 10) = 20$
Place value of 5 = $(5 \times 100) = 500$
Place value of 6 = $(6 \times 1000) = 6000$
Place value of 7 = $(7 \times 10000) = 70000$
Place value of 1 = $(1 \times 100000) = 100000$
- **Face value:** The face value of a digit in a numeral is the value of the digit itself. Wherever it may be in the place value chart.
In the numeral 17625, the face value of 5 is 5, the face value of 2 is 2, the face value of 6 is 6 and so on.

Types of numbers:

- (i) **Natural numbers:** The counting numbers are called natural numbers.
Thus, $N = \{1, 2, 3, 4, 5, 6, 7, \dots\}$ is the set of natural numbers.
 - (ii) **Whole numbers:** All natural numbers together with zero (0) form the set W of all whole numbers.
 $W = \{0, 1, 2, 3, 4, 5, 6, 7, \dots\}$ is the set of all whole numbers.
Note:
 - Every natural number is a whole number.
 - 0 is a whole number which is not a natural number.
 - (iii) **Integers:** All natural numbers, negatives of natural number and 0, together form the set I of all integers.
Thus, $I = \{\dots, -4, -3, -2, -1, 0, 1, 2, 3, 4, \dots\}$, I is the set of all negative and positive integers.
 - (iv) **Even numbers:** A number divisible by 2 is called an even number.
Thus, $\{2, 4, 6, 8, 10, 12, 14, 16, \dots\}$ is the set of all even numbers.
 - (v) **Odd numbers:** A number not divisible by 2 is called an odd number.
Thus, $\{1, 3, 5, 7, 9, 11, 13, 15, \dots\}$ is the set of odd numbers.
 - (vi) **Prime numbers:** A number greater than 1 having exactly two factors, namely 1 and itself is called a prime number.
 - (vii) **Rational numbers:** A number of the form $\frac{p}{q}$ is called Rational number, (where p and q are integers and $q \neq 0$)
- Thus, $\frac{3}{4}, \frac{5}{6}, \frac{6}{7}$ etc. are rational numbers.
- (viii) **Irrational numbers:** A number which is not of the form of $\frac{p}{q}$ is called irrational number (where p and q are integers and $q \neq 0$)
Thus $\sqrt{3}, \sqrt{5}, \pi$ etc. are Irrational numbers.
 - (ix) **Composite numbers:** Numbers greater than 1 which are not prime, are called composite numbers.
Thus, 4, 6, 8, 9, 10 and 12 etc. are composite numbers.
Note: (i) 1 is neither prime nor composite.
(ii) 2 is the only even number which is prime.
 - (x) **Co-prime:** Two natural numbers a and b are said to be co-prime if their HCF is 1.
Thus, (2, 3), (4, 5), (7, 9) etc. are pairs of co-primes.
- Division on numbers:** Dividend, Divisor, Quotient and Remainder.
Let a number a is divided by another number b and we get quotient q and remainder r.
Then, $\text{Dividend} = \text{Divisor} \times \text{Quotient} + \text{Remainder}$
 $[a = bq + r]$ where $(a \leq r < b)$
- Test of divisibility:**
- (i) **Divisibility by 2:** A number is divisible by 2 if its units digit is any of 0, 2, 4, 6 and 8.
Example: 342, 4616, 52316 etc.
 - (ii) **Divisibility by 3:** A number is divisible by 3 if the sum of its digits is divisible by 3.
Example: 96342, 462372 etc.
 - (iii) **Divisibility by 4:** A number is divisible by 4 if the number formed by the last two digits is divisible by 4.
Example: 1728, 16520, 17624 etc.
 - (iv) **Divisibility by 5:** A number is divisible by 5, if its unit's digit is either 0 or 5.
Example: 625, 15725, 100000 etc.
 - (v) **Divisibility by 6:** A number is divisible by 6 if it is divisible by both 2 and 3.
Example: 6432, 74936 etc.
 - (vi) **Divisibility by 8:** A number is divisible by 8, if the number formed by the last three digits of the given number is divisible by 8.
Example: 175248, 976488 etc.
 - (vii) **Divisibility by 9:** A number is divisible by 9, if the sum of its digits is divisible by 9.
Example: 6372, 5943276 etc.
